

WHAT TO DO IF YOU HAVE BEEN EXPOSED TO COVID-19

By vaccination status

| | NOT VACCINATED/PARTIALLY VACCINATED | FULLY VACCINATED* |
|--|---|---|
| POSITIVE WITH COVID | Isolate yourself immediately Isolation is used to separate people infected with COVID from those who are not infected. The infected person should stay home for 10 days regardless of their vaccination status. If possible, stay in a separate room away from other household members, use a separate bathroom, and wear a face covering when around others. | |
| EXPOSED TO COVID NO SYMPTOMS | Stay home if you had close contact with the person who has COVID-19. You are at highest risk of becoming infected with COVID-19. This is called quarantine. Seek testing 5 days after your last day of exposure. If the results are negative, you no longer need to stay home after day 7. If the results are positive, you need to stay home for 10 days from the test date. If you did not get tested, you no longer need to stay at home after day 10. | You do not need to stay home. Seek testing on the 5th day from your exposure. Wear a face covering for 14 days. If the results are positive, you need to stay home for 10 days from the test date. |
| EXPOSED TO COVID OR UNKNOWN EXPOSURE WITH SYMPTOMS | Stay home and get tested 24-48 hours from the onset of symptoms. Testing sooner than 24 hours may provide a false negative result. If the results are positive, remain home for 10 days from when your symptoms began. If your results are negative and you were not exposed to someone with confirmed COVID-19, remain home until your symptoms have cleared. While you have symptoms, try to isolate from other household members. | |

*An individual is considered fully vaccinated two weeks after their second dose in a 2-dose series, or two weeks after a single dose vaccine.

Testing locations throughout the Eagle River and Roaring Fork Valleys are listed at https://sites.google.com/eaglecounty.us/covidtestingsites/english.
